## What's New In?

CAD and CAM Features: Revisit and revise. Animate complex drawings, or view and work on previously edited designs. (video: 3:20 min.) Autodesk unveils AutoCAD and AutoCAD LT at SIGGRAPH 2019 Delve deeper into AutoCAD and AutoCAD LT. AutoCAD Classic was discontinued, and the older, long-time users were asked to move to AutoCAD LT. This year, the company's focus is on feature development and customer support. AutoCAD Several significant new features are in AutoCAD 2020. New tools are being incorporated into the core functionality. The basic type of feature may be in AutoCAD as an add-on or a plug-in (an example is SpeedZ). The Windows Registry may be used to store the settings. Revisions are available for AutoCAD LT as well as for AutoCAD Classic users. Selecting an area for editing is easier with the Fill command (instead of selecting the area and then editing with the Line tool). In the Selection pane, the Edit command is displayed by default (instead of the Align and Perspective commands). The Edit window can be minimized when working with multiple drawings at the same time. Drawing Sets: Object Drawing Sets, a new feature, provide a set of common features that can be reused for new drawings. Features include: Alignments, Arch and Truss, Bevel and Hatch, Bridge, Butt, Channel, Elevation, Fissure, Geometric, Insert, Line and Rectangle, Modify, Paste, Polyline, Property, Trim, Warp, and more. (See more in the Autodesk blog.com). More complex drawings can be edited together. The Drawings pane can be separated from the main drawing area. The drawing commands can be filtered by tool category, or by the current state of the drawing, like an open surface or closed face. You can now also organize drawings into sub-drawings. VIP The VIP drawing has its own version of the system tray, and it contains helpful information about the drawing (the status, the selected view, the action in the task manager, etc.) (see video: 1:38 min). At the end of the day, a drawing set is a package that contains the drawing objects for the set. The drawing set package is
